General Information

Short summary

A small German start-up company seeks a partner to manufacture new nail polish bottles according to sustainability and new application requirements. The bottles should be made from glass and plastics but alternatives can be discussed. The partner should contribute to finalising the design and be in a position to manufacture small as well as large series. A manufacturing agreement should be concluded

Full description

A start-up, based in Germany is specialised in innovative UV nail polishes that are sustainable and more environmentally friendly.

The start-up is looking for a manufacturer for their specially designed nail polish bottle. They designed the bottles themselves in order to include special functions that facilitate the nail polish application (closing mechanism, brush construction). Also, the bottle is designed in a sustainable way so that refills are possible. At the moment the company is working on the design and construction of such a bottle. Soon a 3D model will be available in addition to technical drawings.

As the company philosophy is based on sustainability they are looking for manufacturing companies that can confirm short delivery times and routes. Ideally, the partner company should think very sustainably and quality-conscious and also work with environmentally friendly materials or long-lasting materials. The main materials of the bottles are planned to be glass and plastics but this is not mandatory and the German company is open to advice and

alternatives. They strive for a long-term partnership manufacturing cooperation.
